

Python Developer | AI/ML Enthusiast | Computer Engineering Student

 h-edgethede

Computer Engineering student combining software development, machine learning, and renewable energy systems. Currently building projects in Python and exploring AI applications in real-world problem solving.

CapTech Cohort II Team Lead/Frontend Developer, Sara Foundation Frontend Developer and Team lead. Built a project - Studypath AI for enhanced learning	04/2026 – 05/2026
--	-------------------

BSc Computer Engineering, *University of Lagos* 10/2024 – Present
Lagos, Nigeria

Basic ability to perform Energy Audits, Panel sizing and installation of solar panels

- French

Certificates

- Certificate of Completion: Python Essentials 1- Cisco Networking Academy
- Certificate of Completion: AI Literacy - IBM SkillsBuild [↗](#)
- Certificate of Completion: C++ Training Crash Course - Udemy
- Certificate of participation - Claude Builders club Hackathon
- Certification of Completion: AI for Beginners course - HP Life
- Certificate of Completion: Prompt Engineering with ChatGPT
- Certification of Participation in Solar Design & Installation -Intelligent Systems Lab, University of Lagos.
- Certificate of Participation - CAP Cohort II [↗](#)

Awards

- Best in Common Entrance, Mountain Top Primary School** 08/2018
Award given to the best participant of the common entrance examinations
- Award of 100% scholarship,** 12/2023
Jubril Martins Memorial Grammar School old students association
100% Scholarship given to the best participating students and a laptop
- Award for Love, Dedication and Support, Xtralarge Farms** 09/2024

Projects

- ASL-to-Text/Speech Conversion Model** 02/2026 – Present
Building a computer vision model as a second-year Computer Engineering student that recognizes American Sign Language gestures and converts them to text and speech. Developed using Python, PyTorch, and Scikit-learn, with a Streamlit interface for real-time interaction. Aimed at improving accessibility for the deaf and hard-of-hearing community.
- Voltmart E-Commerce Website** 01/2026 – Present
Designed and developed a gadget e-commerce platform using Python and the Flet framework, featuring a clean UI for seamless product browsing and sales. Built entirely in Python, demonstrating ability to deliver full frontend experiences without traditional web technologies.

Publications

- INVESTIGATION OF WIRELESS COMMUNICATION SYSTEMS USING WAVELET ANALYSIS IN DEFENSE TECHNOLOGIES** [↗](#), Barber Heritage Oluwanifemi 29/01/2026
This comprehensive literature review highlights the advances in wavelet transforms in signal edge detection, spectrum analysis, and so on. A conceptual solution is proposed and a Python based wavelet sensing algorithm proves that wavelet analysis can effectively detect jamming signals hence enhancing the efficiency of defense communication systems.

Organisations

- SEES Innovation Hub, Asst. Team lead - Welfare and Logistics team** 06/2026 – Present
Lagos, Nigeria
- Claude Builders Club, Member** 03/2026 – Present
Lagos, Nigeria
