

Frontend Web developer | AI/ML Enthusiast | Computer Engineering Student

h-edgethedeve barberheritage.netlify.app

Computer Engineering student combining software development, machine learning, and renewable energy systems. Currently building projects in Python and exploring AI applications in real-world problem solving.

CapTech Cohort II Team Lead/Frontend Developer, Sara Foundation Frontend Developer and Team lead. Built a project - Studypath AI for enhanced learning	04/2026 – 05/2026
--	-------------------

SEES Innovation Hub , <i>Asst. Team lead - Welfare and Logistics team</i>	06/2026 – Present Lagos, Nigeria
Claude Builders Club , <i>Member</i>	03/2026 – Present Lagos, Nigeria
Xtralarge Farms , <i>Volunteer Graphics Designer</i>	01/2021 – Present Lagos, Nigeria

BSc Computer Engineering, <i>University of Lagos</i>	10/2024 – Present Lagos, Nigeria
---	-------------------------------------

Python Programming — Proficient
C/C++
Git & Version Control — Proficient
Leadership/Initiative
Photo-voltaic Engineering

Javascript(Frontend) — Proficient
Artificial Intelligence and Machine Learning
Critical Thinking and Problem solving
Adaptability / Learning

- English
- Yoruba
- French

- Certificate of Completion: Python Essentials 1- Cisco Networking Academy
- Certificate of Completion: AI Literacy - IBM SkillsBuild [🔗](#)
- Certificate of Completion: C++ Training Crash Course - Udemy
- Certificate of participation - Claude Builders club Hackathon
- Certification of Completion: AI for Beginners course - HP Life
- Certificate of Completion: Prompt Engineering with ChatGPT
- Certification of Participation in Solar Design & Installation -Intelligent Systems Lab, University of Lagos.
- Certificate of Participation - CAP Cohort II [🔗](#)

Awards

Best in Common Entrance, Mountain Top Primary School Award given to the best participant of the common entrance examinations	08/2018
Award of 100% scholarship, <i>Jubril Martins Memorial Grammar School old students association</i> 100% Scholarship given to the best participating students and a laptop	12/2023
Award for Love, Dedication and Support, Xtralarge Farms	09/2024

Projects

ASL-to-Text/Speech Conversion Model Building a computer vision model as a second-year Computer Engineering student that recognizes American Sign Language gestures and converts them to text and speech. Developed using Python, PyTorch, and Scikit-learn, with a Streamlit interface for real-time interaction. Aimed at improving accessibility for the deaf and hard-of-hearing community.	02/2026 – Present
Voltmart E-Commerce Website Designed and developed a gadget e-commerce platform using Python and the Flet framework, featuring a clean UI for seamless product browsing and sales. Built entirely in Python, demonstrating ability to deliver full frontend experiences without traditional web technologies.	01/2026 – 03/2026

Publications

INVESTIGATION OF WIRELESS COMMUNICATION SYSTEMS USING WAVELET ANALYSIS IN DEFENSE TECHNOLOGIES  , <i>Barber Heritage Oluwanifemi</i> This comprehensive literature review highlights the advances in wavelet transforms in signal edge detection, spectrum analysis, and so on. A conceptual solution is proposed and a Python based wavelet sensing algorithm proves that wavelet analysis can effectively detect jamming signals hence enhancing the efficiency of defense communication systems.	29/01/2026
